KRISHILINK PROTOTYPE

1. Prototype Overview

KrishiLink is a digital platform connecting farmers, buyers, and administrators to streamline agricultural trade. It offers user-friendly dashboards, crop management, real-time updates, and secure authentication to enhance efficiency and transparency in the farming ecosystem.

2. Key Features & Benefits

- User authentication via login/register modals.
- Farmer dashboard to manage crops, view buyers, and track orders.
- Buyer dashboard to explore crops and place orders efficiently.
- Admin dashboard to oversee users, crops, and system analytics.
- Responsive design ensuring accessibility on all devices.
- Interactive UI elements including cards, modals, and flowcharts.
- MSP list helps farmers decide their crop price for fair price system in the market, benefitting the buyers.

3. Prototype Flow

The platform follows a simple flow:

1. User visits landing page.
2. User registers or logs in.
3. Based on role (Farmer / Buyer / Admin), user is redirected to the respective dashboard.
4. Farmers add/manage crops, Buyers browse crops and place orders, Admin monitors platform activity.
5. Notifications, MSP info, and other updates are displayed dynamically on dashboards.

5. Benefits

1. Simplifies agricultural trade between farmers and buyers.
2. Reduces middlemen and increases profit margins for farmers.
3. Provides transparent pricing and updates for informed decisions.
4. Enables admins to efficiently monitor and manage platform activities.
5. Accessible on multiple devices due to responsive design.

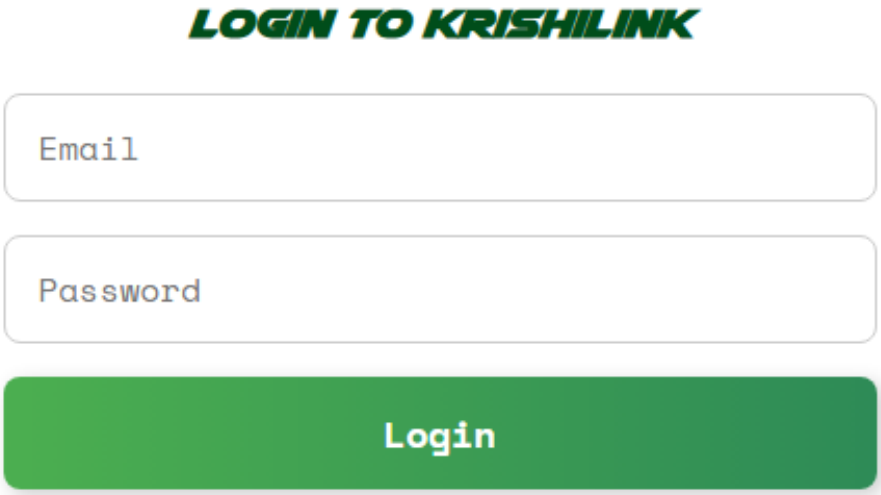

4. Flow Diagram

A flowchart illustrating the KrishiLink workflow is shown below.

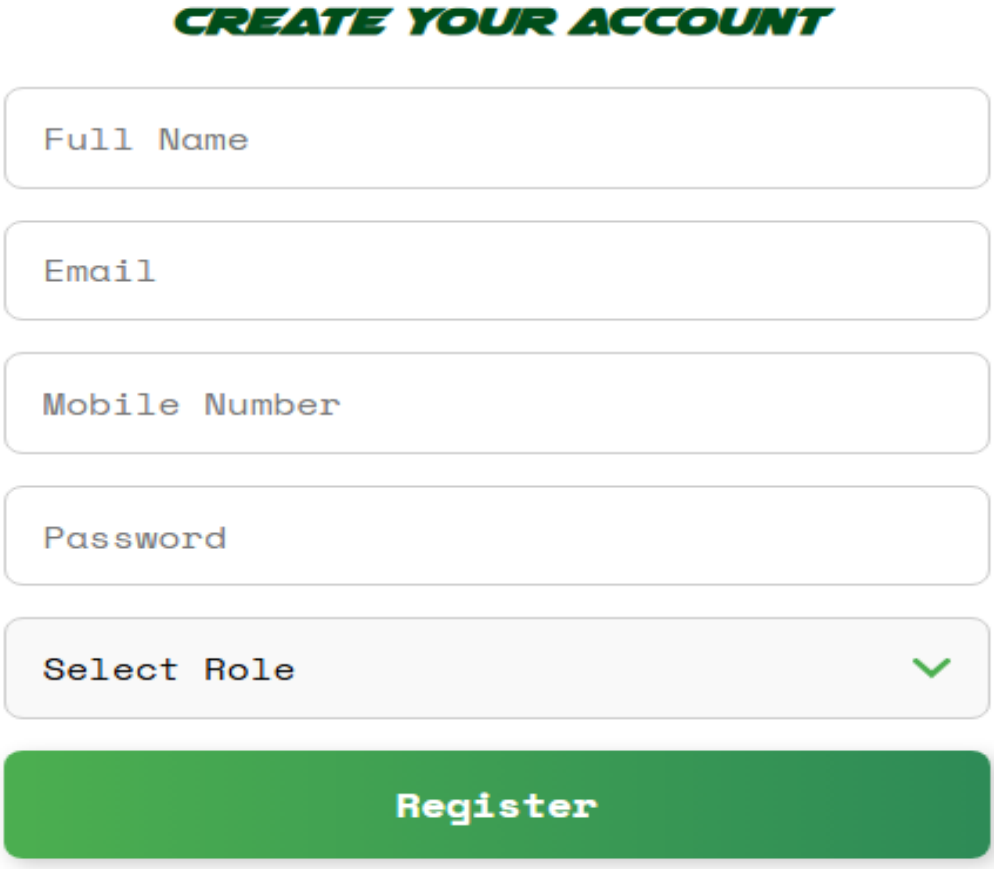

1. Login or Select Role
2. Farmers Create Listings
3. Buyers Send Offers
4. Confirm Orders

5. Login/Register Modals

6. Dashboard Overview

The dashboard is designed to provide users (farmers and buyers) with a clear, interactive overview of all essential information. Key features include:

1. **Crops Overview:** Displays the list of crops available, their quantities, and seasonal trends, allowing farmers to manage inventory efficiently and buyers to browse available produce.
2. **Buyers & Transactions:** Shows active buyers, pending orders, and completed transactions, enabling better coordination and faster decision-making.
3. **MSP (Minimum Support Price) Tracking:** Provides real-time updates on MSP for different crops, helping farmers make informed selling decisions and plan production strategies.

7. Future Improvements / Roadmap

To enhance the platform and ensure robust, scalable functionality, the following features are planned:

- **Mobile Application:** Develop a mobile-friendly app for both Android and iOS, making it easier for farmers and buyers to access the platform on the go.
- **Database Integration (MySQL + PHP):** Implement a robust backend with MySQL and PHP for secure user data management, dynamic updates, and seamless authentication.
- **Weather & Alerts Integration:** Incorporate local weather forecasts, crop-specific alerts, and notifications to help farmers optimize planting and harvesting schedules.
- **Analytics & Insights:** Future versions will include advanced analytics on crop trends, buyer preferences, and transaction histories to guide strategic decisions.

8. Conclusion

KrishiLink offers a streamlined solution bridging the gap between farmers and buyers. By combining real-time crop information, transparent pricing, and a user-friendly interface, the platform empowers farmers to maximize profits while providing buyers with reliable access to fresh produce. With planned improvements such as a mobile app, robust database management, and weather integration, KrishiLink is positioned to become an indispensable tool for modern agriculture.
